DETAILED ACTION

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/03/06 has been entered. Claims 1-56 have been cancelled and new claims 57-97 have been added. Claims 57-97 are pending in the application.

Allowable Subject Matter

Claims 57-97 are allowed.

The following is an examiner's statement of reasons for allowance: With regard to independent claims ~~56~~⁵⁷ and 91, none of the cited prior art discloses or suggests the optical multiplexing/demultiplexing device previously claimed wherein a phase-generating device disposed between two MUX/DMUX devices generates a wavelength dependent phase/optical frequency dependent phase with respect to a wavelength of light over a whole passband comprising a plurality of individual passbands, the phase setting a wavelength period between centers of adjacent passbands which are located on a wavelength-domain grid/optical frequency domain grid.

The most relevant prior art, the Takiguchi reference of record, discloses one or more optical multiplexing devices and at least one optical delay line interposed between each of the optical multiplexing devices. However, Takiguchi does not further disclose a phase generating device which generates a wavelength dependent phase/optical frequency dependent phase with

respect to a wavelength of light over a whole passband comprising a plurality of individual passbands, the phase setting a wavelength period between centers of adjacent passbands which are located on a wavelength-domain grid/optical frequency domain grid. Applicant has discovered that these features allow setting the optical frequency period and the central optical frequency of the MUX device simultaneously, thereby mitigating the problem of deteriorating optical transmission characteristics associated with the prior art. One of ordinary skill in the art would not have found it obvious to modify Takiguchi to achieve this functionality, as there is no suggestion in the prior art that it would be advantageous in any way. Therefore, the claimed invention is patentably distinct from the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
